

HP Indigo 7K Digital Press – Independently Verified for Environmental Credentials

- HP ElectroInk is not classified as harmful to environment and health and does not contain substances of specific concern, heavy metals or aromatic amines.
- More than 1500 media with environmental sustainability certification have been qualified for use on the press and are identified to customers.
- Liquid Electrophotographic (LEP) digital printing process; eliminates the use of many hazardous substances typically used in offset printing while producing print that maintains the look and feels like offset.
- Ink cartridge recycling program and Binary Ink Developer (BID) take-back and parts reuse program; ensure environmentally sound recovery and/or treatment of used consumables.
- Fully-automated Imaging oil recycling: the system enables the press to be self-sustainable in terms of Imaging oil usage.
